Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 15-17 (group I), drawn to a method for making metal oxide particles, classified in class 423, subclass 592.1+.
- II. Claim 13 (group II), drawn to an article, classified in class (unknown), subclass (unknown).
- III. Claim 14 (group III), drawn to an optical article, classified in class 359, subclass 642+.
- IV. Claims 18 (group IV), drawn to an article, classified in class (unknown), subclass (unknown).
- V. Claim 19 (group V), drawn to a composition comprising a polymerizable compound and titanium oxide nanoparticles, classified in class 359, subclass 1+.

The inventions are distinct, each from the other, because of the following reasons:

The inventions set forth in the claim(s) of groups I, II, III, IV and V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as

claimed because each group of claim(s) is capable of supporting its own patent. The subcombination has separate utility. For example, the utility of the metal oxide nanoparticles of the claims of group I can be used as a catalyst, which is separate from the utility of an optical article as set forth in the claim of group III.

Because these inventions are distinct for the reasons given above and the claim(s) set forth in groups I through V have acquired a separate status in the art as shown by their different classification; the search required for any selected group of claim(s) is not required for the other non-selected groups of claim(s), and the claim(s) set forth in groups I through V have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

The applicant is advised that in order for his reply to this requirement to be considered complete, it must include an election of the invention to be examined - even though this requirement may be traversed (37 CFR 1.143).
